Abstract

---

The distribution box (10) has an internal recess (12) in its open side which is closed by a lid (20) when the necessary connections have been made. An e.m. screening element is attached to the lid (20) by an adhesive foil (40). This (30A) is typically made of a fine mesh of brass or stainless steel wires. When the lid is pressed into the box it presses the screening element (30A) into the recess (12). The screen dimensions are such that it contacts both the vertical and horizontal faces of the recess.
